PracticeReady Cyber: project plan

Gantt chart for the COMP3000 Computing Project, from idea generation in October 2026 to the viva in May 2027. Development runs in two-week sprints, each ending with a supervisor meeting and sprint diary entry.

Supervisor: Dr Muhammad Asad
Module: COMP3000 (2026/27)
Sprint length: 2 weeks

Notes

- Deadlines come from the COMP3000 Assignment Brief 26/27 (Table 1). All submissions close at 15:00.
- Sprint 1 removes the existing appointment and local-procedure modules so the platform focuses on three cyber security modules: social engineering calls, identity verification, and phishing & email.
- The Poster & Description submission on 8 March is the mid-project progress checkpoint, with feedback at stand-ups.
- The platform uses only placeholder data: fictional patients, callers and practice details. No real patient data is stored and no real users take part in testing.
- Winter break dates are approximate. Check them against the university calendar.
